

Waypoint — complete source register

Research date: 25 September 2026. Source IDs connect the reports, matrices and implementation decisions. Retrieved content may be cached; evidence notes retain qualifications.

S01 — JobSync repository

<https://github.com/Gsync/jobsync>

README, tree and MIT license checked; self-hosted/local Ollama and discovery documented. Not executed.

S02 — CareerPulse repository

<https://github.com/tcpsyn/CareerPulse>

README and MIT LICENSE checked. ATS autofill breadth is a maintainer claim, not a tested coverage result.

S03 — ApplyPilot repository

<https://github.com/Pickle-Pixel/ApplyPilot>

Six-stage workflow; local LLM options for preparation; Claude Code documented for application execution; AGPL-3.0 license read.

S04 — JobPilot repository

<https://github.com/jlifeng/JobPilot>

Windows MSI/Tauri workspace documented. JD/application tracker is on the roadmap, not a shipped feature in inspected README.

S05 — career-ops repository

<https://github.com/career-ops-hq/career-ops>

AI coding CLI workflow; MIT license confirmed with live GitHub connector, not only cached search.

S06 — sur9e repository

<https://github.com/arspesk/sur9e>

MIT attribution to career-ops; web UI around coding-agent workflows. Trademark is separate.

S07 — JobNavigator repository

<https://github.com/vesaiias/JobNavigator>

README MIT label; personal/educational disclaimer creates an additional interpretation question. Capture extension is not submission autofill.

S08 — Reactive Resume repository

<https://github.com/amruthpillai/reactive-resume>

MIT license inspected; resume-building reference, not a complete search/submission product.

S09 — OpenResume repository

<https://github.com/xitanggg/open-resume>

AGPL-3.0 repository; resume builder/parser. Parser tests do not certify all ATS products.

S10 — Resume Matcher repository

<https://github.com/srbhr/Resume-Matcher>

Apache-2.0; PDF/DOCX import, local Ollama or cloud, tailoring and PDF export documented.

S11 — JobSpy repository

<https://github.com/speedyapply/JobSpy>

MIT Python discovery library. Former Bunsly URL redirects here. Not an application platform.

S12 — GodsScion LinkedIn applier repository

https://github.com/GodsScion/Auto_job_applier_linkedIn

Current MIT license read via live GitHub connector; older cached copy showed AGPL. Platform policy risk is separate from source license.

S13 — JobOps repository

<https://github.com/DaKheera47/job-ops>

AGPL plus Commons Clause stated. Included as source-available comparison under expanded scope; README says no auto-apply. Reuse restrictions remain.

S14 — EasyApplyJobsBot license

<https://raw.githubusercontent.com/wodsuz/EasyApplyJobsBot/main/LICENSE>

CC BY-NC-SA 4.0 noncommercial restriction. Not unrestricted open-source software.

S15 — Liam-Frost AutoApply repository

<https://github.com/Liam-Frost/AutoApply>

PolyForm Noncommercial; README explicitly says browser fill/click-submit and outcome sync remain not_implemented.

S16 — Historical AIHawk URL

<https://github.com/feder-cr/AIHawk>

Observed redirect to feder-cr/invisible_playwright_mcp; historical recommendation lists may identify a different current project.

S17 — ApplyPilot fork: ibarrajo

<https://github.com/ibarrajo/ApplyPilot>

README describes Gmail/human-review additions; fork license not independently resolved in this survey.

S18 — ApplyPilot fork: alok-sin

<https://github.com/alok-sin/applypilot>

README describes hardening and ApplyPilot-Plus lineage; independent license verification outstanding.

S19 — ApplyPilot workflow: yvonnehe772

<https://github.com/yvonnehe772/applypilot>

README-level workflow lead only; do not assume same lineage/license as Pickle-Pixel.

S20 — ApplyPilot workflow: iknalos

<https://github.com/iknalos/ApplyPilot>

README describes profile/bookmarklet and supervised browser workflow; license unresolved.

S21 — ApplyPilot app: kaanddemir

<https://github.com/kaanddemir/applypilot>

README describes tracker and browser-local WebLLM options; license unresolved.

S22 — career-ops Cowork plugin

<https://github.com/andrew-shwetter/career-ops-plugin>

MIT repository label observed; plugin depends on its host and is not a complete native application.

S23 — Open Source Definition

<https://opensource.org/osd>

Open-source software must permit redistribution and not restrict fields of endeavor.

S24 — Commons Clause FAQ

<https://commonsclause.com/>

Official FAQ explicitly distinguishes the clause from open-source licensing.

S25 — Greenhouse Job Board API

<https://docs.greenhouse.io/job-board.html>

Public GET; application POST requires employer API credential. Job-specific required-field validation matters.

S26 — Lever Postings API

<https://github.com/lever/postings-api>

Public postings; application POST requires API key; custom questions are not fully exposed. Hosted form recommended.

S27 — Ashby public Job Postings API

<https://developers.ashbyhq.com/docs/public-job-posting-api>

Published postings and optional compensation. Does not establish unrestricted public submission access.

S28 — LinkedIn prohibited software

<https://www.linkedin.com/help/learning/answer/a1341387>

Official restriction on scraping/automating LinkedIn via third-party software/extensions.

S29 — Simplify Copilot autofill help

<https://help.simplify.jobs/articles/2415391-using-copilot-to-autofill-applications>

Autofill, reused answers, review and tracking already exist; coverage percentages are vendor claims.

S30 — Simplify resume tailoring help

<https://help.simplify.jobs/articles/0515607-auto-tailoring-your-resume-with-copilot>

Preserved original and tailored versions already exist; no interview guarantees.

S31 — Teal job tracker

<https://www.tealhq.com/tools/job-tracker>

Commercial adjacent baseline for saved jobs, organizing applications and workflow support.

S32 — Huntr job tracker

<https://huntr.co/product/job-tracker>

Commercial adjacent baseline for application tracking/CRM.

S33 — JobSpy issue 385: pagination hang

<https://github.com/speedyapply/JobSpy/issues/385>

Reporter describes a page-two hang despite timeout; anecdotal report, not independently reproduced.

S34 — JobSpy issue 370: direct URL missing

<https://github.com/speedyapply/JobSpy/issues/370>

Reporter attributes missing direct URLs to DOM change; not an independently established root cause.

S35 — JobSpy issue 340: country validation

<https://github.com/speedyapply/JobSpy/issues/340>

Reported unsupported countries motivate explicit coverage reporting, not a global-coverage claim.

S36 — Qwen3.5-9B official model card

<https://huggingface.co/Qwen/Qwen3.5-9B>

Apache-2.0 weights; thinking, tools and multimodality. Card recommends long contexts; proposed smaller contexts require task-specific evaluation.

S37 — Qwen3-14B official model card

<https://huggingface.co/Qwen/Qwen3-14B>

Reasoning-capable comparison candidate, not a second simultaneously resident model.

S38 — Qwen3.5 GGUF quantizer listing

<https://huggingface.co/mradermacher/Qwen3.5-9B-GGUF>

Quantizer is primary for its own artifact sizes, not the original model publisher. Q4_K_M listed about 5.63 GB; size is not peak VRAM.

S39 — llama.cpp repository

<https://github.com/ggml-org/llama.cpp>

Local inference runtime; pin release/commit and model checksum during implementation. Not benchmarked here.

S40 — llama.cpp server reference

<https://github.com/ggml-org/llama.cpp/blob/master/tools/server/README.md>

Reasoning flags, JSON outputs, API authentication and bounded contexts. Pin supported flags rather than assume every version supports them.

S41 — llama.cpp build reference

<https://github.com/ggml-org/llama.cpp/blob/master/docs/build.md>

Windows-compatible build paths and GPU backends; vendor/backend support still needs real hardware tests.

S42 — Ollama thinking

<https://docs.ollama.com/capabilities/thinking>

Explicit think control and separated reasoning/final fields; API semantics differ by model.

S43 — Ollama context length

<https://docs.ollama.com/context-length>

Memory grows with context; inspect actual processor/offload split, do not infer fit from parameter count.

S44 — Tauri capabilities

<https://v2.tauri.app/security/capabilities/>

Capability union and custom-command default exposure require explicit attention; not a complete sandbox.

S45 — Tauri Windows installer

<https://v2.tauri.app/distribute/windows-installer/>

MSI/NSIS and WebView2 installation choices; Windows system runtime remains separately licensed.

S46 — Playwright authentication

<https://playwright.dev/docs/auth>

Saved browser authentication state is sensitive. Never commit it or put it in diagnostic bundles.

S47 — OWASP LLM01 prompt injection

<https://genai.owasp.org/llmrisk/llm01-prompt-injection/>

Indirect injection from documents and webpages; prompting/RAG alone does not eliminate the risk.

S48 — WCAG 2.2

<https://www.w3.org/TR/WCAG22/>

Accessibility baseline. Native assistive-technology testing is additionally necessary.

S49 — Windows application design

<https://learn.microsoft.com/en-us/windows/apps/design/>

Windows UI conventions and accessibility guidance.

S50 — Windows 10 Home and Pro lifecycle

<https://learn.microsoft.com/en-us/lifecycle/products/windows-10-home-and-pro>

General support end is 2025-10-14. ESU/managed exceptions need separate review; Windows 11 is proposed release baseline.

S51 — Gmail API scopes

<https://developers.google.com/workspace/gmail/api/auth/scopes>

Read-only/metadata are restricted scopes; local filtering is not a narrower OAuth authorization. Verification obligations must be reviewed.

S52 — FTC job scams

<https://consumer.ftc.gov/articles/job-scams>

Useful risk signals and verification behavior; no automated scam verdict can establish legitimacy.

S53 — SQLCIPHER license

<https://www.zetetic.net/sqlcipher/license/>

Community BSD-style license vs separately licensed commercial offerings; choose community source build for the proposed core.

S54 — SearXNG documentation

<https://docs.searxng.org/>

Optional self-hosted metasearch; neither unlimited upstream search nor guaranteed availability.

S55 — ChatGPT Images 2.5 announcement

<https://openai.com/index/introducing-chatgpt-images-2-5/>

Official 2026-09-08 announcement; available image tool does not expose a selectable Flare/Sunburst backend.

S56 — GodsScion current license

https://raw.githubusercontent.com/GodsScion/Auto_job_applier_linkedIn/main/LICENSE

Live connector returned MIT text, modified 2026-08-10. Cached license disagreement resolved in favor of live file.

S57 — CareerPulse current license

<https://raw.githubusercontent.com/tcpsyn/CareerPulse/main/LICENSE>

MIT text directly inspected.

S58 — career-ops current license

<https://raw.githubusercontent.com/career-ops-hq/career-ops/main/LICENSE>

MIT text fetched with live GitHub connector after web cache miss.

S59 — ApplyPilot current license

<https://raw.githubusercontent.com/Pickle-Pixel/ApplyPilot/main/LICENSE>

AGPL v3 text directly inspected, no Commons Clause in inspected file.

S60 — JobPilot current license

<https://raw.githubusercontent.com/jlifeng/JobPilot/main/LICENSE>

Apache-2.0 text fetched using live GitHub connector.

S61 — Reactive Resume current license

<https://raw.githubusercontent.com/amruthpillai/reactive-resume/main/LICENSE>

MIT text directly inspected.

S62 — JobSync current license

<https://raw.githubusercontent.com/Gsync/jobsync/main/LICENSE>

MIT license text retrieved.

S63 — AI Job Hunter current repository

<https://github.com/saeedkolivand/ai-job-hunter-app>

Closest documented desktop competitor. README, selected glossary/code paths and Git tree inspected; NOT executed. Code Apache-2.0; bundled ATS company datasets CC BY-NC 4.0. Counts are maintainer claims.

S64 — AI Job Hunter pinned context glossary

<https://github.com/saeedkolivand/ai-job-hunter-app/blob/593219e263ab21e3939ae1967c5ce54fcab9ace0/docs/CONTEXT.md>

Defines application, generation, derived Applied badge, mutable status, extension autofill, network/privacy boundaries. Current code behavior still requires reproduction.

S65 — AI Job Hunter deterministic evidence-selection code

<https://github.com/saeedkolivand/ai-job-hunter-app/blob/593219e263ab21e3939ae1967c5ce54fcab9ace0/apps/desktop/src-tauri/src/pipeline/resume/stages/evidence.rs>

Path established from repository search and README. Mechanism documented as deterministic source selection; full code audit and execution not performed.

S66 — AARG repository

<https://github.com/joseym/aarg>

Rust CLI/WASM, local models, evidence-grounded adversarial tailoring and Typst export documented. MIT/Apache-2.0 files listed. Not executed.

S67 — openroles repository

<https://github.com/datascry/openroles>

MIT code, CC BY-SA 4.0 dataset. README says 51 ATSES while About says 52 platforms; preserve discrepancy, do not certify coverage.

S68 — commandjobs repository

<https://github.com/nicobrenner/commandjobs>

Apache-2.0 terminal search; local database does not remove cloud GPT dependence. Roadmap separated from implemented claims.

S69 — SwizJobs repository

<https://github.com/lucasnevespereira/swizjobsbot>

MIT; French Telegram interface, Swiss alerts using SerpApi, scheduling, PostgreSQL and retention. No independent runtime test.

S70 — job-hunter README

<https://github.com/AkmalFairuz/job-hunter>

Go public LinkedIn search library, CLI and Discord notifications; repost/caching/partial results documented. License unresolved in this survey.

S71 — AfriApply README

<https://github.com/Kumneger0/afriApply>

Afriwork-specific self-hosted discovery, AI cover letters and automatic submissions. Cloud AI keys and Turso appear in prerequisites. License unresolved.

S72 — Opportunity Bridge Agent README

<https://github.com/damonleelcx/Opportunity-Bridge-Agent>

Go binary and Qwen API; sample offline demo is not local inference. Criteria explanations, approval hash, consent and human fallback already documented.

S73 — Aletheia Apps README

<https://github.com/KarstenEvans/aletheia-app>

Topic hit, but inspected README primarily describes portable language/news/story apps. Explicitly no license selected; public does not grant reuse.

S74 — JobApply repository

<https://github.com/p95max/JobApply>

Django tracker, imports/exports, Drive backups and Gmail proposals. Auto-apply terminology can refer to tracker-status changes rather than application submission.

S75 — Rust researcher infrastructure

<https://github.com/mareurs/researcher>

Rust query/retrieval/dedup/rerank research infrastructure; not a job-seeker app. Size/speed claims not independently benchmarked.

S76 — User-requested jobseekers topic

<https://github.com/topics/jobseekers>

GitHub topic query yielded 37 named repositories in this run. Topic membership is not proof of product relevance, license or completeness.

S77 — Simplify Copilot

<https://simplify.jobs/copilot>

Autofill, tracking and tailoring documented; current navigation also advertises interviewer, talent agent, networking and introductions. Advanced flows not tested.

S78 — Huntr product

<https://huntr.co/>

Resume/cover tailoring, tracker, contacts, job capture, interview organization and autofill. Observational testimonials are not causal benchmarks.

S79 — Jobright product

<https://jobright.ai/>

Vendor describes matching, tailoring, autofill, insider connections and verified/fresh jobs; claims not independently tested.

S80 — LoopCV product

<https://www.loopcv.pro/>

Discovery, manual review alternative, auto-apply, recruiter email, company exclusions, analytics and CV A/B testing already advertised.

S81 — AIApply product

<https://aiapply.co/>

Auto-apply, materials, interview practice/live assistance, translation and tracker; core subscription plus application credits. No comparative outcome testing here.

S82 — Scout product

<https://applyscout.app/>

Vendor documents preferences, tailored materials, delegated applying and submission receipts. Do not claim receipts alone are novel.

S83 — HireProof documentation

<https://hireproof.tech/docs>

Source-linked fraud/job audits and receipts marketed. Open interface does not establish an OSI code license.

S84 — RolePatch Proof

<https://rolepatch.com/proof>

Evidence-backed achievements/private imports and selective sharing documented; some verification flows are future-facing.

S85 — ApplyFlow Radar

<https://career-ops.space/>

Review workspace, fit checks, portal plans and receipts documented. Ownership/lineage distinct from similarly named GitHub career-ops until verified.

S86 — Algorithmic Writing Assistance on Jobseekers Resumes Increases Hires

<https://pubsonline.informs.org/doi/10.1287/mnsc.2024.04528>

Management Science 71(12), 2025; Wiles, Muniyikwa and Horton. Nongenerative writing assistance experiment; no causal inference about this proposed LLM app.

S87 — A causal test of the strength of weak ties

<https://digitaleconomy.stanford.edu/publication/a-causal-test-of-the-strength-of-weak-ties/>

Science 377(6612), 2022, DOI 10.1126/science.abl4476. Large randomized networking study, nonlinear/context-dependent effects.

S88 — ConFit v2

<https://aclanthology.org/2025.findings-acl.661/>

Findings ACL 2025. Hypothetical-resume embeddings and hard-negative training for matching. Training technique must never fabricate candidate claims.

S89 — Multilingual Swiss occupational classification

<https://aclanthology.org/2025.findings-acl.1124/>

Findings ACL 2025, Gnehm and Clematide. ISCO/CH-ISCO and multilingual Swiss job classification; supports taxonomy-aware evaluation.

S90 — Lost in the Middle

<https://aclanthology.org/2024.tacl-1.9/>

TACL 2024. Relevant evidence position can affect long-context performance; results concern studied models, not a guarantee about current models.

S91 — Distance between Relevant Information Pieces Causes Bias in Long-Context LLMs

<https://aclanthology.org/2025.findings-acl.28/>

Findings ACL 2025. Tests separated evidence pieces; informs context-position/spacing qualification tests.

S92 — WebArena

<https://arxiv.org/abs/2307.13854>

arXiv 2307.13854, Zhou et al. Functional web-task benchmark. Historical baseline figures are not current leaderboard results.

S93 — OSWorld

<https://arxiv.org/abs/2404.07972>

arXiv 2404.07972, Xie et al. Execution-based computer-use benchmark. Do not project published baselines onto current job applications.

S94 — InjecAgent

<https://aclanthology.org/2024.findings-acl.624/>

Findings ACL 2024. Indirect prompt injection through tool content; evaluation ideas, not a defense guarantee.

S95 — egui / eframe

<https://github.com/emilk/egui>

Native Rust UI, wgpu and AccessKit. Interaction-driven repaint and virtualized lists matter. Native-looking Windows styling is custom work, not a stock guarantee.

S96 — chromiumoxide Rust CDP API

<https://docs.rs/chromiumoxide/latest/chromiumoxide/>

Rust browser orchestration; Chromium itself is a separately licensed non-Rust dependency. Exact release pin required.

S97 — mistral.rs

<https://github.com/EricLBuehler/mistral.rs>

Rust inference candidate; Windows AMD backend/model parity not qualified here. Not selected solely because language is Rust.

S98 — Gemma 4 model card

https://ai.google.dev/gemma/docs/core/model_card_4

Official card includes 12B Unified; model-specific terms and runtime support need review. Not presumed OSI open source or measured to fit this workload.

S99 — llama.cpp context correctness issue 27556

<https://github.com/ggml-org/llama.cpp/issues/27556>

Reporter describes Gated DeltaNet HIP/Vulkan discrepancy on Windows gfx1151, NOT the target RX 9070 XT. Motivates correctness testing; not independently reproduced.

S100 — llama.cpp reasoning control issue 25067

<https://github.com/ggml-org/llama.cpp/issues/25067>

Reporter logs changed/deprecated reasoning controls. Pin version and test behavior instead of copying universal flags.

S101 — Windows design guidance

<https://learn.microsoft.com/en-us/windows/apps/design/>

Native app patterns and accessibility/interaction guidance; not certification of this design.

S102 — Rust Typst document engine

<https://github.com/typst/typst>

Candidate Rust typesetting engine, already used in AARG; version/license/security pin must be verified at implementation.

S103 — docx-rs Rust OOXML documentation

https://docs.rs/docx-rs/latest/docx_rs/

Candidate Rust DOCX pipeline. Export existence is not proof of Word/PDF layout parity; exact release and features require qualification.
